EDUCATION

Civil Engineering Ph.D. (GPA 4.0)

Engineering Science Focus
University of Colorado Boulder

Boulder, CO

2016 – 2021

TECHNICAL SKILLS

Programming	Python, TypeScript/JavaScript, VBA, MATLAB, AutoLISP
Platforms & Data	Palantir Foundry, Apache Spark, Polars, Pandas
Engineering	AutoCAD, PLSCADD, L-PILE, ABAQUS/LS-DYNA
Standards & Tools	NESC, GO-95, FERC-881, Git, Microsoft Office Suite, LaTeX

ENGINEERING EXPERIENCE

Reliability & Standards Solutions Engineer II

Jan 2025 – Present

PacifiCorp

- Applied full-stack TypeScript and Python engineering to design, build, and deploy a Foundry-based data management system end-to-end - from backend pipelines through user-facing UIs - covering audit preparation, interdepartmental data collection, and queue-based processing pipelines.
- Leveraging Spark and Polars, designed backend Python data pipelines to ingest, parse, and remediate enterprise-scale, imperfect legacy data spanning multiple database and spreadsheet sources, automating data cleanup and multi-source merging to reconcile records to production quality standards.
- Deployed AutoCAD experience and design architecture skills to implement AutoLISP one-line-drawing functionality to parse shape geometries and layer data - identifying transmission facilities and equipment, deducing line segment and equipment configurations, and exporting structured data to reconcile database records with engineering drawings.
- Architected a git-inspired version-control framework - a reusable pattern for system analysis lifecycle management within Foundry - supporting cloning, modification, and staged publication of facility analyses through department-specific review checkpoints while the platform was concurrently developed, tested, and adopted in production, with automated resource tracking and validation.
- Applied VBA/Excel programming skills alongside IEEE equipment-rating knowledge to design and build a streamlined, user-friendly FAC-008 substation equipment rating tool from scratch, computing normal and emergency ratings and ranking limiting elements for substation equipment - including breakers, switches, capacitors, reactors, buses, jumpers, and transformers - from company standards and nameplate specifications.
- Utilized knowledge of physics and numerical methods to implement IEEE-compliant thermal rating models in Python, solving the nonlinear ordinary-differential heat balance (solar heat gain, convective cooling, radiative heat loss, conductor resistance) through Runge-Kutta forward integration and Newton-Raphson inverse root-finding, vectorized at scale for static, dynamic, and transient line ratings within the platform.
- Applied geometric and spatial analysis methods to compute mutual-impedance candidate pairs, line-distance statistics, and line-to-line distance visualizations for parallel transmission corridors, integrated into platform UI graphs.

Transmission Engineer I/II

Jan 2023 – Jan 2025

PacifiCorp

- Utilized VBA and Excel programming alongside transmission line rating engineering knowledge to design and build an auditable, automated FERC-881 steady-state line-rating analysis tool from scratch - integrating PLS-CADD structure data, conductor properties, and historical weather data with CIGRE-referenced seasonal rating methodology to compute normal and emergency ratings and critical-span summaries - reducing engineering hours threefold and costs by approx. \$1.5M.
- Utilized in-depth knowledge of PLSCADD, L-PILE, NESC, and GO-95 for design of new power transmission lines and rebuilding/maintenance of existing lines in states of UT, WY, OR, WA, and CA in collaboration with teams of engineers, managers, field crew, and legal.
- Utilized in-depth knowledge of structural engineering and geotechnical engineering for custom-engineered solutions of transmission structures and drilled pier foundations with reference to ASCE, ACI, and FHWA to meet special needs.
- Utilized high-level knowledge of transmission line design to scope new transmission lines in collaboration with other engineering disciplines.
- Employed excel programming and data analysis skills to develop automated tools for deep foundation design, construction package generation, and transmission pole design aids.

- Utilized transmission engineering knowledge and programming experience to generate company sag-tension standards for tree-wire.
- Designed and reviewed drawings for tubular steel poles and drilled piers to withstand vertical and lateral loads.
- Performed detail-oriented technical review of transmission standards and collaboration in their developments.
- Initiated process improvement pipelines for transmission design processes and documentations.
- Improved company standards and company procedures with detail-oriented reviews/QAQC.

RESEARCH EXPERIENCE

Academic Research

Graduate Research Assistant / Ph.D. Candidate

Jun 2018 – Jan 2023

University of Colorado Boulder, Boulder, CO

- Collaborated with a team of three senior researchers at the Lawrence Berkeley National Laboratory to investigate and develop mechanistic models for subcritical crack growth healing.
- Utilized knowledge of fundamentals of fracture mechanics, fluid transport, and boundary element methods to develop a software that couples fields of mechanics and physics.
- Merged expertise in research, programming, and engineering to investigate multiphysical and multiscale solid-fluid interactions (e.g., adsorption, surface tension, solvation pressure) in porous solids and develop a thermodynamics-poromechanics-based MATLAB software for “adsorption-induced deformation of microporous material”.
- Employed technical writing and illustrative skills to author 4 peer-reviewed publications in respected journals of JMPS, IJSS, and EFM.

Talks and Presentations

EMI Virtual Conference 2021 and EMI Conference 2022

May 2021 and May 2022

- Applied illustrative and verbal communication skills to deliver presentations titled “A multi-scale theory explaining the initial shrinkage of micro-porous solid upon gas adsorption” and “A Multiphysical Surface-Force Based Fracture Theory for Subcritical Crack Growth in Surface-Reactive Environments”, followed by Q&A from engineering and academic audience.
- Received runner up award in the 2021 Student Poster Competition for poster presentation on sorption-induced deformation of porous material.

Lawrence Berkeley National Laboratory BES

Sep 2020 – Jan 2023

- Presented regular scientific presentations on topic of crack propagation to teams of research professionals and senior scientists in the LBNL BES with diverse backgrounds in mechanics, physics, and chemistry.

TEACHING EXPERIENCE

Teaching Assistantships/Tutoring

Teaching Assistant / Tutor

2014 – 2019

University of Colorado Boulder, Boulder, CO & University of Tehran, Tehran, Iran

- Presented class lectures and laboratory teaching sessions, held office hours and exam preparation sessions, prepared and graded exams and homework question sets, for courses of Advanced mechanics of materials and Dynamics.
- Tutored students for FE exam with 100% success rate.
- Tailored teaching approach specific to different student learning styles and utilized CAD skills to enhance visualization and understanding.
- Held office hours and graded homework, quizzes, and class projects for Structural Analysis II and Hydraulics of open channels as a Teaching Assistant at the University of Tehran, Fall 2014 and Fall 2015.

LEADERSHIP ROLES

Mentorship

Research Mentor

Jan 2022 – Jan 2023

University of Colorado Boulder, Boulder, CO

- Trained new Ph.D. students on fundamentals of mechanics, written and oral skills, and technical research.
- Guided a research trainee through the modeling and simulation of beam bending in humidity actuators.

President/Co-president — Persian Student Organization, Boulder, CO

Aug 2018 – May 2019

University of Colorado Boulder, Boulder, CO

- Proposed, secured funding, planned, and oversaw student events in collaboration with professionals from industry and academia, local businesses, and non-profit organizations.
